Let's have a look

Mercury is the closest planet to the Sun and the smallest one in the entire Solar System. This planet's name has nothing to do with the liquid metal, since Mercury was named after the Roman messenger god. Despite being closer to the Sun than Venus, its temperatures aren't as terribly hot as that planet's. Its surface is quite similar to that of Earth's Moon, which means there are a lot of craters and plains. Speaking of craters, many of them were named after artists or authors who made significant contributions to their respective fields. Mercury takes a little more than 58 days to complete its rotation, so try to imagine how long days must be there!

Two ideas

Venus

Venus has a beautiful name and is the second planet from the Sun. It's hot and is the second-brightest natural object in the night sky

Mercury

Mercury is the closest planet to the Sun and the smallest one in the Solar System. This planet's name has nothing to do with the liquid metal

Three ideas

Mercury

Mercury is the closest planet to the Sun and the smallest one in the Solar System

Mars

Despite being red, Mars is actually a cold place. It's full of iron oxide dust

Venus

Venus has a beautiful name and is the second planet from the Sun
